
GRTM finite-aperture observation comparison | isotropic Rayleigh | damping=0.02
Dashed curves: first three available roots; the four amplitude observables have different source/statistical definitions
Direct surface spectrum
no aperture
Line-source FK
L=270 m; dx<=5 m; Hann
Point-source FJ
L=270 m; dx<=5 m; Hann
Isotropic-noise FJ
L=270 m; dx<=5 m; Hann
Direct surface spectrum
no aperture
Line-source FK
L=1070 m; dx<=5 m; Hann
Point-source FJ
L=1070 m; dx<=5 m; Hann
Isotropic-noise FJ
L=1070 m; dx<=5 m; Hann
Phase velocity (km/s)
Frequency (Hz)
10 log10(per-frequency normalized power / FJ magnitude), dB
